

Activity: Turn a NYC Skyscraper Green!

Using the design examples from the online activity (<https://skyscraper.org/featured/green-buildings>), now you can turn an existing NYC skyscraper into a green building! We've featured some buildings below to get you started. The examples we chose—the Shelton Hotel and the Barclay Vesey Telephone Building—are both skyscrapers built in accordance with the 1916 Zoning Law, which led to the classic NYC skyscraper look of buildings that step back as they get taller.

Print out this PDF and reimagine these towers if they were built today, using modern green design!

West elevation: Barclay Vesey Telephone Building, built 1926.

North elevation: Shelton Hotel, built 1924.
